

SAP® Document & Reporting Compliance

A major challenge for international companies is to comply with the local legal requirements of the countries in which they operate. The scope of legal obligations to regularly submit electronic documents to local tax authorities has increased significantly in recent years, e.g. in the form of mandatory electronic invoices, VAT returns, transport reports, electronic accounting vouchers, etc.

SAP Document & Reporting Compliance supports you in this regard in the national and international environment. With SAP Document & Reporting Compliance, a wide variety of eInvoice formats such as XMLInvoices can be created in **SAP ERP** and **S/4HANA** and sent via **PEPPOL**, **e-mail** or **ZUGFeRD**.

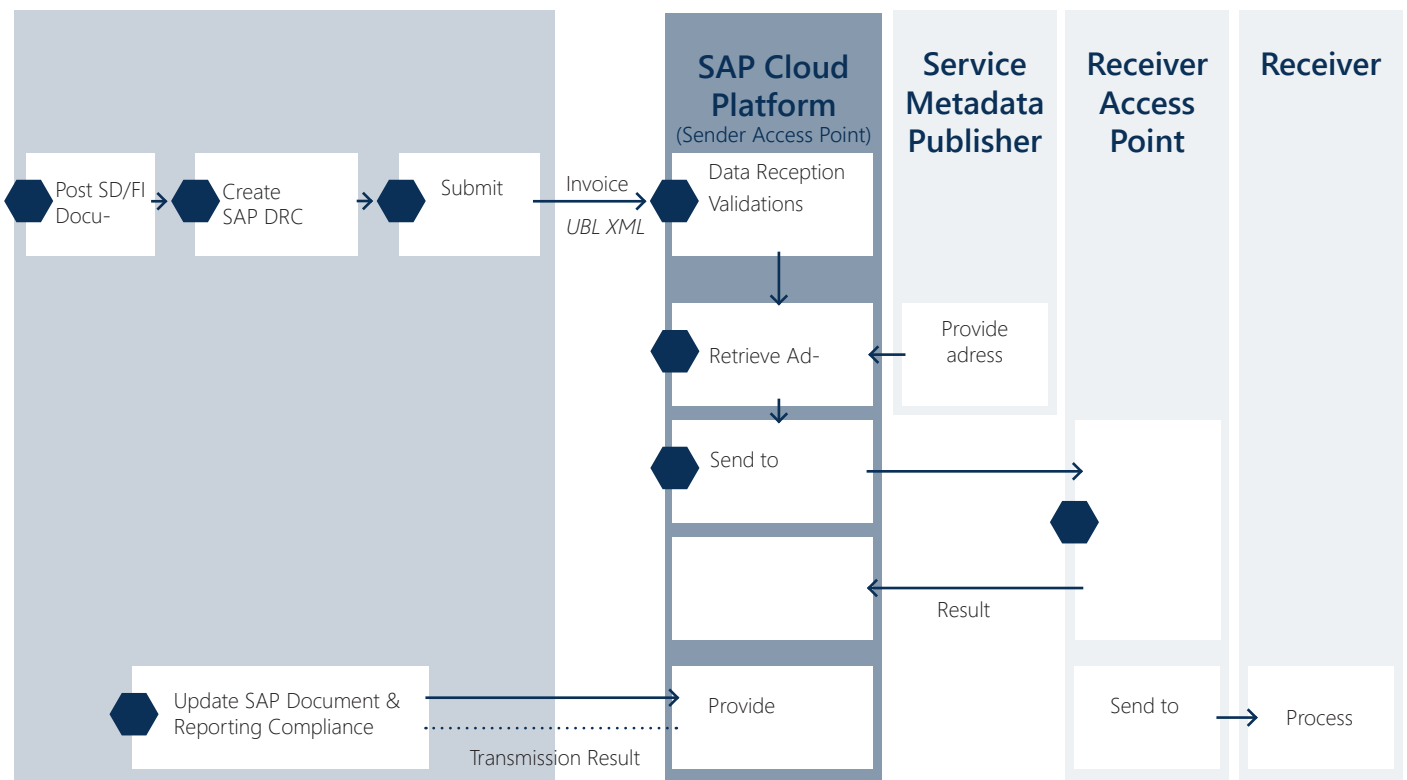

While each legal system has its own procedures and specifics, the common factor is always the use of a specific electronic document format. SAP has recognized the need to bring all these country-specific legal requirements and processes together in a single tool.

Document & Reporting Compliance helps you to comply with global legal requirements for electronic invoices and other business documents. Within SAP ECC or SAP S/4HANA, the solution is based on the eDocument framework for creating and processing electronic documents.

eInvoices

eInvoices can be created from various SAP source documents, such as SAP SD, SAP FI, IS-U. For this purpose, the data of the processes in the Application Interface Framework (AIF) is mapped into the respective country-specific and process-specific XML target format. Within the mapping, the XML can be enriched with further data and documents so that all requirements can be met.

The SAP Document & Reporting Compliance solution, invoicing option for PEPPOL, additionally enables to use the PEPPOL network. The SAP hosted solution is connected to the leading SAP ERP or S/4HANA so that the outgoing invoices are transmitted to the recipient access point via SAP's sender access point.
